

IN THE SPECIFICATION

The specification as amended below with replacement paragraphs shows added text with underlining and deleted text with ~~strikethrough~~.

Please REPLACE the paragraph beginning at page 7, line 23, with the following paragraph:

The Web server 7 having received the information transmission request 4 reads out the WWW document information 11 corresponding to the URL and starts up the tag analysis program 8. Fig. 2 shows processing procedures of the tag analysis program 8. The update determination program 9 is started up in the tag analysis program 8, and the Cookie information ~~from~~ from the client terminal 1 and the WWW document information 11 of the Web server 7 are compared. More specifically, the comparison is a comparison between a final access date and time based on the Cookie information and individual update information of the WWW document information 11 as shown in Fig. 3. As a result of the comparison, tags are rewritten by the tag conversion program 10 for update information after the update date and time read out from the Cookie information.
